

Zulaikha Habibullah

Melbourne, VIC

LinkedIn: [linkedin.com/in/zulaikhahabib](https://www.linkedin.com/in/zulaikhahabib) | Website: dabozai.com | Work Rights: Australian Graduate Visa (Full-Time)

PROFESSIONAL SUMMARY

University of Melbourne CS graduate (Computing & Software Systems) with hands-on experience building full-stack applications, RAG pipelines, and cloud-native automation. AWS Certified Generative AI Developer. Currently running Dabozai, a platform teaching agentic AI and prompt engineering to students through structured courses and hands-on labs.

SKILLS & CERTIFICATIONS

Certifications: AWS Certified Generative AI Developer – Professional | PCAP (Certified Associate in Python) | AWS Certified AI Practitioner

Languages: Python, JavaScript (React), SQL (PostgreSQL)

Cloud & Infrastructure: AWS (Lambda, API Gateway, S3, IAM), Google Cloud Run, Docker

AI/ML: LangChain, RAG, NLP, scikit-learn, Strands Agents, AnythingLLM, LangFlow

Tools & Frameworks: FastAPI, REST APIs, Git, Supabase, Vercel, Composio

Practices: Agile/Scrum, Data Structures & Algorithms, CI/CD

EDUCATION

Bachelor of Science (Computing and Software Systems)

The University of Melbourne | *Melbourne International Undergraduate Scholarship* | 2022–2025

PROJECTS

Dabozai — Gen AI & Agentic AI Training Platform | *Founder & Lead Instructor (2025–Present)*

I run Dabozai, a platform for providing Gen AI and agentic AI training through structured lessons and follow-along demos. The first course I teach includes theory and hands-on labs using tools such as LangChain, Strands Agents, AWS AgentCore, AnythingLLM, LangFlow, Composio and Claude Code. I cover concepts like prompt and context engineering, transformers architecture, MCPs, AI agents and workflows, RAG, running local models and LLM training stages (Pre-training, SFT, RLHF, Back propagation). The second course covers robotics, sensors (temperature, humidity and motion), using computer vision for object recognition. At present, I have conducted 10 sessions for a batch of 5 students per session.

Tech Stack: Python, LangChain, Strands Agents, AWS AgentCore, AnythingLLM, LangFlow, Composio, Claude Code

Mental Health Services Navigation Using LLMs | *Capstone Project*

Built an LLM-backed service navigation chatbot to help people with mental health issues based in Victoria to quickly and easily find tailored mental health services near them using natural language. The service feature included data cleanup and ingestion (loading and vector embedding) pipeline, RAG implementation, augmenting vector search results with Google Places API, geofencing to ensure Google Places returns only the results within Victoria, authentication and authorization module with RBAC access management using Supabase Auth module with JWT tokens, user friendly UI. Led delivery as rotating Scrum Master: facilitated client workshops and in-person stakeholder reviews, ran stand-ups multiple times per week, and kept sprint execution on track through clear scope and progress reporting. I also evaluated deployment options and presented spikes and proof-of-concept comparing AWS Lambda to Google Cloud Run and AWS API Gateway to FastAPI with in-person sessions with the rest of the team.

Tech Stack: Python, LangChain, Supabase (Postgres + pgvector extension), React, Vercel, FastAPI, Google Cloud Run

Automating Operational Tasks | *IT Operations*

Working as a part of the IT operations team where I was given the task of automating day to day operational tasks. These included data loading and cleaning for CMDB service team, identifying unused AWS resources, identifying resources with no tags, generating billing reports per department, generating a full inventory of resources across accounts/regions, identifying stale IAM users (no login in 90 days, unused access keys), checking for publicly accessible S3 buckets and generating IAM access reports and permission audits.

Tech Stack: Python, AWS (IAM, S3, Cost Explorer, Organizations)

Netflix Content Rating and Genre Prediction Using NLP | *Machine Learning*

Worked in a team to investigate the relationship between Netflix content descriptions and their associated ratings across genres. Built a genre prediction model using Logistic Regression on TF-IDF vectorized descriptions, tuning classification thresholds to optimize precision-recall balance (best F1 at threshold 0.2). Developed a Random Forest regression model to predict IMDB scores, IMDB votes, TMDB scores, and TMDB popularity from descriptions within each genre. Performed data preprocessing including lemmatization, stop word removal, and null handling across a dataset of ~5,850 titles. Enriched missing data fields using the IMDB and TMDB APIs. Visualised word-rating correlations per genre using matplotlib.

Tech Stack: Python, scikit-learn, NLTK, spaCy, matplotlib, pandas

EXPERIENCE

Dabozai — *Founder and Gen AI Tutor*

Melbourne, VIC | 2025–Present

- Built Dabozai from the ground up as a solo founder, handling all aspects of the business including branding, platform setup, course planning, student acquisition, and delivery.
- Manage end-to-end operations across two concurrent courses: student enrolment, scheduling, session facilitation, and post-session follow-ups for batches of 5 students.
- Translate complex AI and robotics concepts into structured, beginner-friendly lessons, developing the ability to communicate technical ideas clearly to diverse skill levels.
- Continuously iterate on course material based on direct student feedback, refining lab exercises and pacing to improve learning outcomes across 10 sessions delivered to date.

Gulf Candle Technologies — *Intern*

Riyadh, Saudi Arabia | 2021 (6 months)

- Delivered presentations on AI and machine learning fundamentals for internal teams, building confidence communicating complex technical concepts to non-technical audiences at age 18.
- Automated data parsing and loading scripts using Python, reducing manual effort for the operations team and improving data accuracy.
- Identified unused AWS resources and generated per-department AWS service cost reports, contributing directly to cloud spend optimisation.
- Gained first hands-on industry experience in development and cloud infrastructure, strengthening both technical skills and professional workplace communication.

NBA Emporium — *Level 3 Retail Assistant*

Melbourne, VIC | 2024–2025

- Focused on creating a high-quality customer experience while meeting the store's sales targets and supporting the brand's in-store culture and community goals.
- Supported issue resolution on the floor by handling customer concerns and finding practical solutions that prioritised satisfaction and long-term loyalty.
- Completed clothing repairs and assisted with stock organisation and presentation to maintain a polished retail environment.
- Helped coordinate in-store events and activations, supporting smooth setup, customer engagement, and team coordination.

The Bagel Shop — *Level 2 Customer Service Team Member*

Melbourne, VIC | 2022–2023

- Provided friendly and efficient service to customers while maintaining a clean and well-organised café environment across multiple locations including Swanston Street, South Yarra, and rotational partner venues.
- Took responsibility for training and onboarding new staff at the South Yarra location during the store's opening period, helping them learn service standards, workflow, and day-to-day routines.
- Handled orders, food and drink preparation, till operations, and transaction processing while supporting daily open and close routines.
- Worked closely with team members during busy periods to keep service smooth, resolve customer issues quickly, and ensure a consistent customer experience across different sites.
